

**Amendments to the Specification:**

Please replace the Abstract of the invention with the following rewritten  
Abstract:

**DISPLAY SUBSTRATE AND DISPLAY DEVICE**

A display substrate ~~(1)~~ comprising a plate, for example a glass plate ~~(2)~~, on which display elements, e.g. pixels ~~(4-8)~~ comprising pixel electrodes ~~(72)~~ and thin-film-transistors ~~(69)~~, and an acoustic transducer ~~(10)~~, e.g. a microphone, speaker or buzzer, formed from thin film layers over a cavity ~~(28)~~, are formed. The cavity ~~(28)~~ may be provided by powderblasting through the depth of the glass plate ~~(2)~~. The display substrate ~~(1)~~ with integrated acoustic transducer ~~(10)~~ may be incorporated in a display device, e.g. a liquid crystal display device ~~(11)~~. Also described is a discrete acoustic transducer, comprising a plate of an insulating material ~~(102)~~, a cavity ~~(120)~~ in the plate ~~(102)~~, a plurality of layers that have been deposited on the plate, and a moveable member ~~(122)~~ formed from the deposited layers and positioned over the cavity ~~(120)~~.
